SURE-LOC
ICON

Icon

The world's first sight that puts both you and the sight in the perfect position!

INTRODUCING

Gravity DROP Technology™

Up to 15°

Micro-adjusts (up to 15° each way) to your natural hand cant!

Allows you to assume your most natural position while assuring the sight is always in line with gravity!

Gravity Drop will improve your shooting
Until now, shooters have been forced to physically adjust their form to assure their sight is in line with gravity. With revolutionary Gravity Drop Technology, the new Sure-Loc® Icon micro-adjusts up to 15° (each way) allowing for your natural hand cant. This tension-free position will reduce fatigue and improve your shooting.

Fish Tank Test

We submerged the Icon into an aquarium for 2 days to test performance in wet conditions. Icon windage and elevation adjustments performed flawlessly!

Paint Shaker Test

We attached the Icon to a paint can shaker and left it running at 3,500 shakes per minute. After over 4 million shakes the paint shaker broke down but the Icon still had not moved!

Available in 6 and 9 inch

Precise, Repeatable Adjustments Without Lock-down

Ergonomic Design: All Rounded Edges

Clicking Cant Micro Adjustment (1/10 Degree)

Scopes Not Included (Accepts Any Scope)

Quick Detach Scope

Clicking Third Axis Micro Adjustment (1/10 Degree)

ICON Models Available in Black

Precise, Repeatable Sight and Accessory Mounting

Turn In/Turn Out Adjustment On Bar

Extra-Light Titanium Guide Rod

Sure-Loc's non-locking precision design is more accurate
Because there is no need to lock down, you avoid any associated movement as well as the accuracy-affecting wear that comes with it.

Six axis adjustment for total flexibility to adjust to your form

- Icon features six axis including four adjustments which give you the ability to micro-fine tune:
- Bar length adjustment – .002 inches per click
 - Windage adjustment – .002 inches per click
 - Elevation adjustment – .002 inches per click
 - Cant adjustment – 1/10 degree per click
 - Third axis adjustment – 1/10 degree per click
 - Fourth axis scope adjustment

Scope adjustment eliminates reflection/distortion

With Icon you can adjust the angle of your scope lens so it is in perfect alignment with your eye. This is important especially with magnification as it eliminates any reflection or distortion that comes with an angled view.

Sure-Loc scope features fully protected fibers

The new Sure-Loc S2 scope features wrap-around fiber optics which gather an exceptional amount of light and that are fully enclosed for maximum protection.

	Handed	Frame	Extension	Color	Scope	Mounting Block	Weight	Accessories
